Creating a Green Airport Curb
Various airports and ground transportation operators are taking actions to lower hydrocarbon emissions, but operators are struggling with the financial cost of complying with newer, less polluting engines and vehicle operating requirements. These new standards, requirements, and solutions vary widely across North American airports. Thus, both airports and ground transportation operators need a common approach to reduce hydrocarbons and actions that promote safe and fuel efficient operations. These issues, and examples of how the sustainable green airport curb can work, will be the focus of this opening panel session by ground transportation operators.
Presenters.....Jeff Finkel, GO Transportation Group
.....David Bird, SuperShuttle Corporation

1:15 p.m. Breakout Sessions/Workshops

The following smaller breakout sessions will engage delegates in discussions involving important issues for ground transportation operations and airports. While a moderator is assigned for each breakout, each delegate is encouraged to relate how these things are operated or administered at their airport and/or operations. The objective of these roundtable discussions is to learn from each other's successes and mistakes.

- **What could the costs of operating airport commercial vehicles be under these new requirements?**
Moderator.....Jim Gleich, SuperShuttle Corporation
- **Are open entry taxicab operations at airports inherently dangerous, fuel inefficient, and possibly unsafe?**
Moderator.....Greg Lawrence, San Antonio International Airport
- **Are high speed rails financially beneficial to airports?**
Moderator.....Dara Hayden, D/FW
